

FAASTeam presents:

Partners on the Air - A Conversation between Pilots and Controllers about Radio Communication

The pilot and controller partnership is vitally important to aviation safety. The services that controllers provide to pilots make VFR flights much safer, and make IFR flights possible. The Air Traffic Control system in the US is a very efficient and effective method of allowing thousands of flights to safely happen at the same time. It works because both sides of the relationship – pilots and controllers – work together to exchange the information needed. In this seminar, Dan Dyer and Air Traffic Controller Dylan C. Krassensky discuss each individual's responsibility, and how to improve communication for safety and efficiency. Each will recount scenarios from their own experience and use outside examples to provide examples of both the good and the bad.

Directions: Pilots who fly in should park in transient parking on the opposite side of the field and expect to walk about 10 minutes (.5 mile) to the Flight Center. Suite 215 is upstairs in the northwest corner. On occasion, rides may be prearranged through San Carlos Aviation and Supply.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
